

1. Around **waist** where you want the **top edge of the chaps** to be
1A. Top of chap waist to center of knee.
2. Upper thigh—around the **top** of the leg at the fullest part (at crotch)
3. Mid Thigh (halfway between upper thigh and center of knee)
4. Around knee at kneecap
5. Around the fullest part of the calf (your boot tops will be a little below this point so be sure the boots are not larger than the leg. If they are, please note that for me)
6. Waist to crotch---take this measurement from top of chap waist just to the top of the leg.
7. Crotch to knee----take this measurement from the top of the leg (where you finished measurement # 6) to the center of the knee.
8. Outseam---from the top of the chaps (at your side where you did the waist measurement) straight down to the floor on the outside of the leg. Do NOT add extra inches. Be wearing your boots!
9. Center of knee to top of toes
10. Inseam---from crotch straight down to the floor on the inside of the leg standing with feet together.

Pull the measuring tape only as snug as you want the finished chaps to fit. Do not pull it so snug as to crease the leg and do not put a finger under the tape.

Please be wearing the boots and jeans/pants you'll use with your chaps when you are being measured. NO low rise jeans!
